

Product Brief

Provider:

Authorize.Net Payment Gateway

Authorize.Net

Target Merchants

- E-commerce merchants who sell online, with or without shopping cart software
- Mail order/telephone order merchants (MOTO)
- Merchants who sell memberships or subscription-based services with recurring billing

Payment Gateway

An Authorize.Net **Payment Gateway** account enables merchants to accept credit card and electronic check payments from their e-commerce websites. Authorize.Net provides the following features and benefits to e-commerce merchants:

- **Accept a Variety of Payments** – All major credit cards, gift cards, signature debit cards, and eCheck.Net (electronic checks from bank accounts).
- **Multiple Connection Methods** – Each merchant can choose a method that's right for their business: link to the Authorize.Net secure hosted payment form, host their own secure payment form, or use one of Authorize.Net's 90+ certified shopping cart solutions.
- **Manage Transactions** – Use a full-featured Merchant Interface to monitor and control payments through the merchant's website.
- **Prevent Fraud** – Identify suspicious transactions with Authorize.Net's value-added products and built-in fraud tools.
- **Risk Management** – Sensitive data is stored in the Authorize.Net PCI-compliant data center, never on the merchant's computer.
- **Receive Payments Quickly** – Funds are automatically deposited into the merchant's bank account within days.
- **Free Help** – Authorize.Net provides live technical and account support to merchants, as well as access to online documentation and user guides.

Simple Checkout

Simple Checkout helps merchants create "Buy Now" and "Donate" buttons for their website, even if they have minimal technical expertise. Simple Checkout is a great solution for organizations that rely on donations and specialty merchants that typically sell one item (in any quantity) per order.

Virtual Terminal

The Virtual Terminal enables mail order/telephone order (MOTO) merchants to manually enter transactions to process sales. Batch Upload enables merchants to upload transaction data from enterprise applications or other file-based systems. Merchants access the Virtual Terminal and Batch Upload through the web-based Merchant Interface.

Automated Recurring Billing

Automated Recurring Billing (ARB) is a convenient and easy-to-use tool for submitting and managing recurring or subscription-based transactions. Merchants create a subscription in the Merchant Interface that includes the customer's payment information, a billing amount, and payment schedule.

Advanced Fraud Detection Suite

The Advanced Fraud Detection Suite™ (AFDS) is a set of customizable, rules-based filters and tools that identify, manage and prevent suspicious and potentially costly fraudulent transactions. Merchants can customize AFDS filters and tools to match their business needs and control how suspicious transactions are handled.

Customer Information Manager

The Customer Information Manager (CIM) allows merchants to store customers' sensitive payment information on Authorize.Net's secure servers, simplifying compliance with the Payment Card Industry Data Security Standard (PCI DSS) as well as the payments process for returning customers and recurring transactions.

Virtual Point of Sale

Authorize.Net's Virtual Point of Sale (VPOS) allows merchants to process swiped, card present transactions without a traditional credit card terminal. VPOS turns an Internet-connected computer into a point-of-sale terminal with the addition of a USB card reader. VPOS is compatible with MagTek Centurion card reader models 21073075 (configured to security level 2), 21040101, 21040102, 21040146, and 21040140.

eCheck.Net

Authorize.Net offers an exclusive, fully integrated electronic check payment method, eCheck.Net. Using eCheck.Net, merchants can accept and process payments from consumer and corporate bank accounts directly from their website or through the Authorize.Net Virtual Terminal.

Additional Information

- Authorize.Net offers a document library, including data sheets and case studies, at <http://reseller.authorize.net/learn/docs/>.
- Authorize.Net created a series of video tutorials to help merchants set up and manage their payment gateway account. See <http://www.authorize.net/videos/>.
